Message

It is a pleasure to know that Department of Bioengineering, Integral University, Lucknow, India, in collaboration with Tashkent Chemical-Technological Institute, Tashkent, Uzbekistan, is organizing "Indo- Uzbek Meet and an International Conference on Trends and Innovations in Food Technology (*from farm to fork*)".

Food innovation is the development and commoditization of new food products, processes, and services. Right now, it's growing rapidly. Food and beverage companies are looking for ways to make healthy, nutritious offerings that are not only enticing, accessible, exciting and unique, but also sustainable. I am confident enough to state that the organization of this conference is certainly going to serve as a starting point for a more in-depth dialogue among scientists, consumers, industries and government about the near- and long-term uses of innovative ideas in the field of innovative technologies in the sector of food technology.

I am confident that this conference will serve the interest of scientists, progressive food-industries all over the globe. This conference will provide a much-needed platform for exchange of the meaningful dialogues among expertise of field, innovative ideas as well as propagation of new ideas to the food industries.

I extend my warm greetings and compliments to the organizers of this event and wish them all the success in their endeavor.

(Bhaskar Narayan)
